

BLACK DIAMOND® 5928 GUN SAFE
1250° / 45 Minute Fire Rating

At Dakota Safe Company we take fire protection very seriously. We have tested dozens of our safes to ensure the accuracy of our fire test results. These results enable us to assign "Fire Ratings" to each of our safes. The above graph depicts minutes and temperature. This test is used to determine how long it takes for the interior temperature of the safe to reach 350°, the point where interior damage begins. Please feel confident that the above graph is the actual, accurate and undoctored test results. We encourage you to compare.
